In order to secure your device and its data, Apple has included a feature called Find My iPhone on its products. When you use this feature with your iPhone, your iPhone cannot be used without first entering your iCloud login details. This way it keeps thieves or other people from using or reactivating your device. If you have bought a refurbished iPhone and it is iCloud locked, you may be worried if your iPhone can be unlocked. You can unlock an iCloud locked iPhone and remove Activation Lock without previous owner. Read and learn 4 available methods.

What Does It Mean When an iPhone iCloud Is Locked?

What happens when an iPhone is iCloud locked? There are many limitations an iCloud locked iPhone has. On a locked iPhone, you can basically do nothing. All that you get to see on the main and the only screen on your device is a message stating the phone is locked.

Activation Lock on iPhone

Activation Lock on iPhone

This means you cannot make phone calls, use any apps, send or receive text messages, and change any setting options.

Your iPhone will not let you get to the main screen until you enter the Apple ID and the passcodes to unlock it.

Your iPhone gets locked this way when you mark it as lost in the Find My app on your device. Also, if someone erases

your device and tries to reactivate it, they will get this lock message on the device's screen. Until and unless they enter

your iCloud password, they cannot activate your phone.

How to Unlock an iCloud Locked iPhone?

Now that you know the limitations the iCloud lock brings with it, you may want to find out if it is possible to unlock an

iCloud locked iPhone. A straightforward answer to that question is YES. You can unlock an iCloud locked iPhone but

you must meet all the prerequisites. The following are the top 4 methods you can use to unlock iCloud locked iPhone.

Solution 1. Get the Original Owner to Unlock Your iPhone

One of the easiest ways to unlock an iCloud locked iPhone is to get the original owner to unlock the phone for you.

Since the original owner will likely have their iCloud password with them, they will be able to enter the password on the

iPhone and get it unlocked.

Once they have unlocked your iPhone for you and they have removed their account from the phone, you should be able

to set up your iPhone with your own iCloud account.

Step 1. While you are on the password screen on your locked iPhone, ask the original owner to enter their iCloud

password. This will unlock the device.

Step 2. When your iPhone is unlocked, head into Settings and tap the owner's name at the top.

Step 3. Scroll all the way down and tap on Sign Out. This will sign out to the original owner of your phone.

Log out from the iCloud account on the iPhone

Log out from the iCloud account on the iPhone

Step 4. You can now sign back in using your own iCloud account.

Solution 2. Unlock Your iPhone from iCloud

If you cannot meet the original iPhone owner in-person, another way to get your iCloud locked iPhone unlocked is to get

the original owner to remove the device from the iCloud website. This is basically equal to them entering their

password on your iPhone. This procedure can be done remotely and the owner does not need to be with you.

All the owner needs are access to the Internet and their iCloud login details. The following should walk you through the

procedure to unlock an iCloud locked iPhone remotely with the iCloud website.

Remove iPhone from the iCloud Account

Remove iPhone from the iCloud Account

Step 1. Get the original owner to open the iCloud website and log-in to their iCloud account.

Step 2. Once they are logged-in, they need to click on the option that says Find iPhone.

Step 3. On the following screen, click on All Devices at the top and choose your locked iPhone from the list.

Step 4. Select the Erase iPhone option and then Remove from Account.

The locked iPhone will be erased and removed from the original owner's account. You can then link the iPhone to your

own iCloud account while setting up the phone.

Solution 3. Use an iCloud Lock Removal Service

There have been several services to help you remove the iCloud lock from your iOS-based devices. In 2021, here comes

the best way to bypass iCloud lock on iPhone/iPad/iPod touch. As an all-in-one iOS unlocker, AnyUnlock -iPhone

Password Unlocker is a professional bypassing iCloud activation lock tool for iOS device users. It can easily unlock

iCloud locked iPhone either on your Windows or Mac computer. Besides, it is also the best solution for you to get rid of

the lock no matter it is linked to an unknown Apple ID or getting an attack by a hostile iCloud Activation Lock.

iCloud Activation Lock Is Bypassed Successfully

Within a few days, you should get a message saying your iPhone is unlocked. You can then turn on your iPhone and it

should no longer have the iCloud lock on it.

Please DO NOT log into iCloud from the Settings on your iPhone iPad iPod touch or factory reset your device which will

lock the device again.

Solution 4. Use a DNS Bypass Method

There is a workaround that allows you to use a modified DNS server to make your iPhone think the device is unlocked.

You can use this DNS server after connecting your iPhone to a WiFi network. In some cases, this might just work for

you and get your device unlocked for you.

With that said, there is no guarantee that this method will work. However, there is no harm in giving it a try and seeing

if it works for you. All you basically need to do is change your current DNS server to a different one and that should do

the trick for you.

Step 1. Connect your iPhone to a WiFi network and tap on the I next to the network name to open the settings menu.

Step 2. Tap on the option that says Configure DNS on the following screen to change the DNS servers for your iPhone.

Edit DNS on iPhone

Edit DNS on iPhone

Step 3. Enter one of the following DNS servers depending on where you are located.

USA: 104.154.51.7

Europe: 104.155.28.90

Asia: 104.155.220.58

Other: 78.100.17.60

Enter custom DNS on iPhone

Enter custom DNS on iPhone

Step 4. Select the Activation Help option on the lock screen and your iPhone will be unlocked.

Can iCloud Lock be Removed?

Now, you already knew what is an iCloud locked phone. And, you can remove the iCloud lock on your iPhone with the

methods above. Removing with the help of the previous owner is the easiest and quickest way. Other tips like DNS

bypass and iCloud removal service are also available without the previous owner.

Bonus Tip. Unlock iPhone Apple ID with AnyUnlock

If you want a straightforward method to remove the Apple ID from your iPhone, you can turn to AnyUnlock – iPhone

Password Unlocker. It works like a charm to help you remove unwanted Apple ID from your device. After removal, it

will allow you to set up your iPhone with a new Apple ID account.

Keep in mind that this app will not remove the activation lock from your iPhone. It only helps remove the Apple ID from

the device. You can use AnyUnlock to delete Apple ID as follows.
